

Aluminium Sinker

Datawell - Oceanographic Instruments

Sinker weight for 12 mm polypropylene rope

For larger depths, Datawell provides in-line sinkers which avoid the polypropylene line coming afloat. The sinker consists of two identical aluminium parts which can be fitted to the 12 mm multiplaited polypropylene rope supplied by Datawell. Applying or removing the sinker from the rope can be done without special equipment or small parts.

Sinker weight can be mounted on and removed from the polypropylene rope without interruption of the rope or removing of the terminals.

A wedge in each part avoids the sinker weight keeps the parts locked on the rope.

Specifications

General	Weight	1.25 Kg in air 0.80 Kg submerged in seawater
	Material	Aluminium
	Buoyancy of 12 mm PP-rope	0.01 Kg/m
